

# **Supporting Teachers to Systematically Analyze Students' Strengths and Struggles and Identify Next Instructional Moves**

Laura Grandau, Erikson Institute

Karen C. Fuson, Northwestern University Emerita

Donna Johnson, Erikson Institute

For more details about problem solving with visual supports to bolster the mathematical practices, or for details about CCSS domains, please see the 13 hours of Teaching Progressions Fuson has made and posted at [karenfusonmath.net](http://karenfusonmath.net)

This presentation is also posted there.

# Background and Focus of Session

- This work grew out of Fuson-led *Children's Math World's* project (now called *Math Expressions*), 20+ years of research on math teaching, children's thinking, teacher learning, and curriculum development.
- Today we present one of the tools we used during our research, that has become a powerful tool used in effective coaching and teacher support.

# Effective Coaching and Supporting

- is collaborative and thought-provoking
- involves a caring but critical friend relationship
- aims to strengthen a teacher's knowledge of **core mathematical concepts**; as well as her use of **core mathematical practices** in the service of building a **productive math talk community** where everyone explains and discusses mathematical ideas

# Math Talk Community

Bridging for teachers  
and students by coherent  
learning supports

**Phase 3** Formal math methods,  
fluency

Math Sense-Making  
Math Structure

Math Drawings  
Math Explaining

**Phase 2** Research-based mathematically desirable  
and accessible methods,  
understanding and growing fluency

Math Sense-Making  
Math Structure

Math Drawings  
Math Explaining

**Phase 1** Student-generated methods,  
exploring and growing understanding

Learning  
Path

## Common Core Mathematical Practices Used in a Math Talk Community

<p><b>Math Sense-Making:</b> <b>Make sense and use appropriate precision</b></p> <p>1 Make sense of problems and persevere in solving them. 6 Attend to precision.</p>	<p><b>Math Drawings:</b> <b>Model and use tools</b></p> <p>4 Model with mathematics. 5 Use appropriate tools strategically.</p>
<p><b>Math Structure:</b> <b>See structure and generalize</b></p> <p>7 Look for and make use of structure. 8 Look for and express regularity in repeated reasoning.</p>	<p><b>Math Explaining:</b> <b>Reason, explain, and question</b></p> <p>2 Reason abstractly and quantitatively. 3 Construct viable arguments and critique the reasoning of others.</p>

# The Math Practices in Action

A teacher asks every day:

Did I do **math sense-making** about **math structure**  
using **math drawings** to support **math explaining**?

How can I do some part of this better tomorrow?

**Visual models are core ideas and practices in the CCSS and support reasoning and explaining.**

The models can be simple math drawings that students make and use in their own ways to problem-solve and explain their thinking.

**Visual models help teachers and students understand what a student is thinking.**

Recording **errors** in visual models or in numerical methods can help a teacher see student struggles and make decisions about how to overcome them.

# Class Error Analysis Sheet

## History and Uses (Then and Now)

- Used during research to focus content, design problem-sequences, collect information about student thinking and common errors, analyze and organize for learning progressions
- Used to build assessments and supports for all
- Used to know who and what to re-teach, whole-class, small-group, and individual learners
- Easy to use, robust tool gives teachers big picture of mathematical thinking of all students on unit tests, a one- or two-item quiz or other assessment work

## Nancy Problems 1 and 2

1. In my yard were 9 robins and some cardinals.  
Altogether there were 17 birds.  
How many cardinals were there?

Situation Equation

$$9 + \square = 17$$

Answer

8

**Nancy**

$$9 + 8 = 17$$

**17**

2. Josina had some plums.  
She gave 8 to her brother. She had 6 left.  
How many did she have at the beginning?

Situation Equation

$$\square - 8 = 6$$

Answer

14

**Nancy**

$$8 - 2 = 6$$

**6**

## Nancy Problems 3 and 10 Compare Misleading Language

3. Pauline has 5 library books.  
Pauline has 8 fewer than Roberto.  
How many library books does Roberto have?

$$5 + 8 = R \quad \text{or} \quad R - 8 = 5 \quad 13$$

**Nancy** **3**

10. Frances painted 12 pictures.  
This was 5 fewer than Dan painted.  
How many did Dan paint?

$$12 + 5 = D \quad \text{or} \quad D - 5 = 12 \quad 17$$

**Nancy** **12 - 5 = 7** **7**

**How do you know who painted more pictures?**

## Nancy Problem 6

$$122 - 374 = 348$$

6. There were some oranges in the school lunchroom. 122 were eaten at lunch. There are still 374 oranges in the school lunchroom. How many oranges were there to start with?

$$S - 122 = 374 \quad 496$$

The image shows three stages of a handwritten subtraction problem:

- Stage 1:** A subtraction problem  $122 - 374$  with a horizontal line under the bottom number. The result is  $8$ . The top number  $122$  has a  $1$  above the  $2$  and a  $1$  above the  $2$ .
- Stage 2:** The same subtraction problem  $122 - 374$  with a horizontal line under the bottom number. The result is  $48$ . The top number  $122$  has a  $0$  above the  $1$  and a  $1$  above the  $2$ .
- Stage 3:** The same subtraction problem  $122 - 374$  with a horizontal line under the bottom number. The result is  $348$ . The top number  $122$  has a  $0$  above the  $1$  and a  $1$  above the  $2$ .

Arrows indicate the progression from Stage 1 to Stage 2, and from Stage 2 to Stage 3.

# Grade 1

Rosa picked 6 carrots. Her sister picked some too. Together they picked 10 carrots. How many did Rosa's sister pick?

Class A

Class B

5-group

5-group

4 carrots	
4 CARROTS	ooooo o+oooo
4 carrot	ooo ooo oo+oo =
10 6+4=10	oooo oooo
4 Carrots	ooooo + oooo = oooooo ooooo
4 Carrots	ooooooo oooo
4 KARTS	ooooooo
4 Carrits	6+4=10

4 Carrot	
4 CARROTS	6+4=10
4 Carrots	
4 carrots	
4 carrot	<del>10</del> 6/4
4 Carrots	+4 6 10
4 carrot	+10 6/10
5 carrot	10 6/4
4 carrot	

I remember 4+6=10

## Grade 2

Jenna has 11 goldfish. She gives some to her friend. Now she only has 7 goldfish. How many goldfish did she give to her friend?

Class A

4 goldfish She gives to her friend	$11 - 4 = 7$
4 goldfish	$11 - 4 = 7$
4 goldfish	$11 - 4 = 7$
4 goldfish	$11 - 4 = 7$
4 goldfish	$11 - 4 = 7$
4 goldfish	$11 - 7 = 4$

Class B

4 goldfish	$11 - 4 = 7$
4 goldfishes	$11 - 4 = 7$
4 goldfish	$11 - 4 = 7$
4 goldfish	$7 + 4 = 11$
4 goldfish	$11 - 4 = 7$

5-group

situation equation or solution equation?

## Situation Equation

$\square$ fish.	$\overset{3f}{11 - \square} = 7$
$\square$ goldfish	$11 - 7 = \square$

## Solution Equation

## The 6 Situations

K

**Add To  
Take From**

Start + Change = Result  
Start - Change = Result

→  
(becomes)

 - \ 1 \ 8 \ 9 \\
 \hline
 1 \ 5 \ 7
 \end{array}$$

**Visual models are core ideas and practices in the CCSS and support reasoning and explaining.**

The models can be simple math drawings that students make and use in their own ways to problem-solve and explain their thinking.

We want classrooms to be using the mathematical practices in the Math Talk Community:

Students focus on math sense-making about math structure using math drawings (visual models) to support math explaining.

# Effective Coaches

- have detailed mathematical content knowledge; they should have more time to pursue this deeply; it is their major responsibility
- support teachers in their roles as learner and instructional leader; offering questions, comments and suggestions for improving math interactions
- provoke shifts in teacher knowledge and practice by working collaboratively in classroom and school-based context, on the math those children are producing

# **Supporting Teachers to Systematically Analyze Students' Strengths and Struggles and Identify Next Instructional Moves**

Laura Grandau, Erikson Institute

Karen C. Fuson, Northwestern University Emerita

Donna Johnson, Erikson Institute

For more details about problem solving with visual supports to bolster the mathematical practices, or for details about CCSS domains, please see the 13 hours of Teaching Progressions Fuson has made and posted at [karenfusonmath.net](http://karenfusonmath.net)
